

MicroLife

- 🌀 Bring your “soil to life” with the power of essential microbes
- 🌀 Faster uptake and availability of nutrients
- 🌀 Better soil structure (water holding capacity, carbon, nitrogen fixing)
- 🌀 Out-compete disease (soil and foliar)
- 🌀 Promotes germination, root development, maturing and flowering

Multikraft Probiotics is a world leader in multi-strain microbe technology. **MicroLife** is a mixture of over 100 isolates from 45+ microbial species such as:

Lactic acid bacteria including *Lactobacillus casei* and *Lactobacillus plantarum*.

Photosynthetic bacteria including *Rhodospseudomonas palustris*.

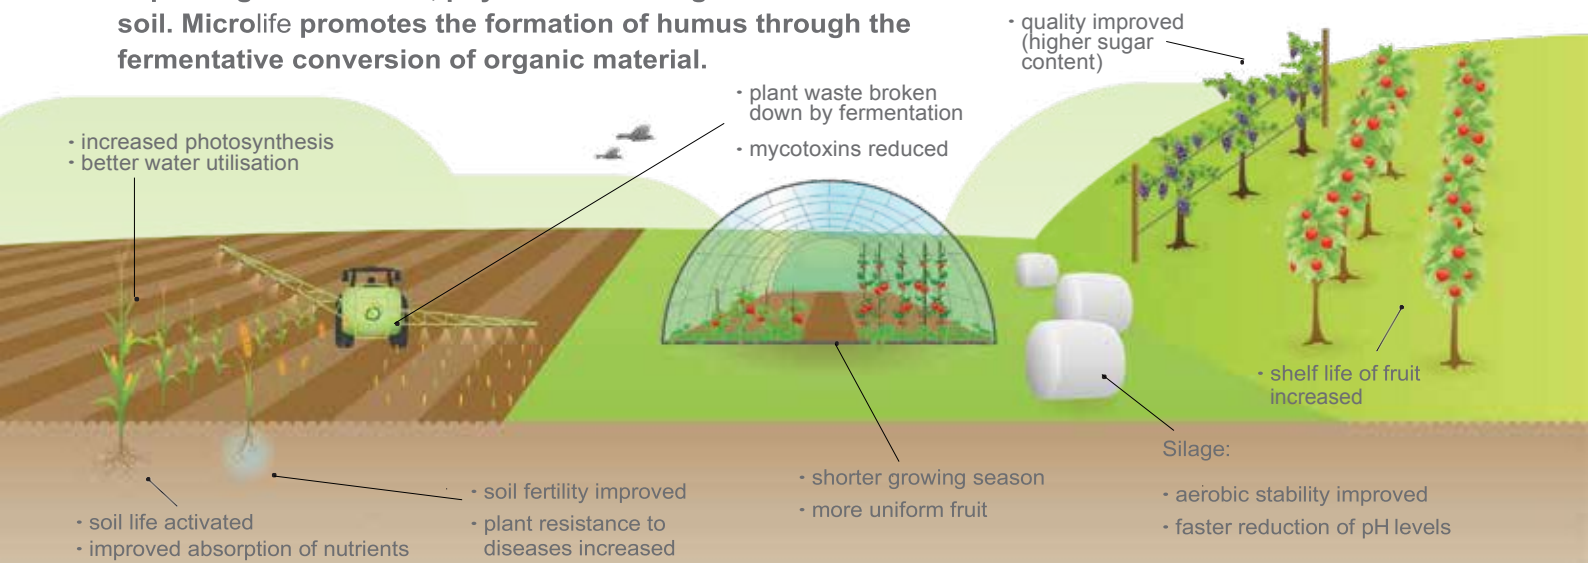

Nitrogenfixing bacteria including *Acetobacter tropicalis*, *lovaniensis* and *syzygii*, and *Rhizobium* species.

Bacillus species including *Bacillus subtilis*/*Lysinibacillus sphaericus* and *Bacillus amyloliquefaciens*

Yeasts including *Saccharomyces cerevisiae*.

MicroLife promotes the fermentative decomposition of plant residues in the soil and suppresses existing harmful fungi in the soil (mycotoxin formers). Furthermore, the incorporation of **MicroLife** promotes germination and root formation in the crop by improving the chemical, physical and biological condition of the soil. **MicroLife** promotes the formation of humus through the fermentative conversion of organic material.
