

Defence N.R.G.

PROBIOTIC

NRG

NUTRITION RESILIENCE GROWTH

-  Plant health enhancement agent with probiotic micro-organisms
-  Natural pest deterrent
-  Strengthens against parasites and fungal attack
-  Improves the natural resistance of plants

Defence N.R.G. is based on a unique microbial consortium combined with the added benefit of a specially developed complex of plant extracts that are multifunctional in their purpose. Some extracts promote the growth of beneficial microbes and contribute necessary micro-nutrients and trace elements, whilst others can suppress the growth of non-beneficial microbes, including certain pathogenic fungi.

The fermented extracts of Garlic and Chilli within Defence N.R.G. can also have an anti-microbial effect, assisting soil and plants naturally.

HOW IT WORKS

Defence N.R.G. is a plant aid to strengthen plants and should be used together with **MicroLife**. For soil applications mix both with Soil NRG whenever possible, and for leaves mix with **Foliar N.R.G.** diluted with water. **Defence N.R.G.**'s primary purpose is not to fight these pests directly, but rather increases the plants natural defence mechanism and resistance to be able to fend off parasite and fungal infestations naturally. The garlic and chilli have complimentary affects, including suppressing pests' appetites and outcompeting disease to maximise plant health, making them robust to external influences.

BASIC INGREDIENTS

Lactic acid and photosynthetic bacteria, yeast, sugar cane molasses, fermented vinegar, alcohol, water, garlic and chilli pods.
